Description

The black coversheet from Transoplast has been specially developed to optimally protect the contents of roll containers against dust, dirt and moisture during storage and transport. Made from high-quality 600D polyester, this coversheet is strong, wear-resistant and suitable for long-term use in various working environments. Thanks to the two robust plastic zips at the front, the cover can be fully opened on one side. The zips are continuous, meaning they can be opened all the way to the top, allowing quick and easy access to the contents. The zipped side is located on the loading side of the roll container and also on the side where both swivel castors are positioned.
