Description

Our Store Box type 9073 with dimensions 350 × 206 × H150 mm is the ideal solution for clear and efficient storage of parts, tools and small products in warehouses, workshops, offices and along production lines. With a length of 350 mm and a capacity of 8.8 litres, this compact plastic Storage bin combines a practical size with sufficient capacity, making it a perfect fit for shelving, racks or workbenches without wasting valuable space.

Made from impact-resistant polypropylene plastic (PP), this Storage bin is robust, durable and suitable for intensive daily use. The material is also weather-resistant and resistant to chemicals, making the bin suitable for industrial use in production, assembly, logistics and maintenance. In addition, the PP plastic used is food-grade, which is why the food sector, pharmaceuticals and the chemical industry also make extensive use of our Store Boxes. Thanks to the use of flexible PP plastic, Store Boxes are also low-noise in use - for a calm working environment.

The practical design makes this plastic Storage bin easy to handle. The generous hand hole ensures that the contents are easy to reach. For efficient use, a longitudinal divider can also be added for compartment division. Store Boxes can be stacked securely with boxes of the same width. The integrated hanging edge at the rear makes the bin suitable for standard rail systems, creating clear vertical storage. This combination of stackability and hanging options saves space and increases efficiency in a warehouse or workplace.

The specific colour of the Store Box supports clear colour coding, making it easy to organise different products or components. Whether you stack several bins on top of each other or organise them horizontally on a workbench, this Storage bin provides a quick overview and prevents products from getting lost. This makes the bin not only ideal for industrial applications, but also perfect for office organisation, hobby rooms or workplaces where efficiency and clarity are important.
